

DATA ANALYTICS PORTFOLIO PROJECT

OLA Ride Bookings

Power BI Dashboard & Analysis

Prepared by **Dipesh Maindolia**

Prepared for Data Analyst & Business Analytics Roles

What This Project Is About

A Power BI dashboard built on OLA's ride-booking data to understand how the business is performing day to day — how many rides are happening, which ones succeed or get cancelled, where the revenue comes from, and how customers and drivers rate their rides.

19

Data Columns
captured per ride

Track Ride Trends

See how ride volume moves over time

Study Cancellations

Find why rides are cancelled, by whom

Understand Revenue

Break revenue down by payment mode

Review Ratings

Compare customer & driver satisfaction

19 Columns Behind the Dashboard

Every ride record captures trip details, timing, status, and feedback.

Trip Details

- Date & Time
- Booking ID & Status
- Pickup & Drop Location
- Vehicle Type

Customer & Timing

- Customer ID
- V_TAT / C_TAT (turnaround time)

Cancellations

- Cancelled by Customer / Driver
- Incomplete Rides & Reason

Value & Ratings

- Booking Value & Payment Method
- Ride Distance
- Driver & Customer Rating

Five Focused Views

The report is split into simple pages, each answering one business question.

Overall

Ride volume over time · Booking status breakdown

Vehicle Type

Top 5 vehicle types by ride distance

Revenue

Revenue by payment method · Top 5 customers · Ride distance per day

Cancellation

Cancelled ride reasons — by customer and by driver

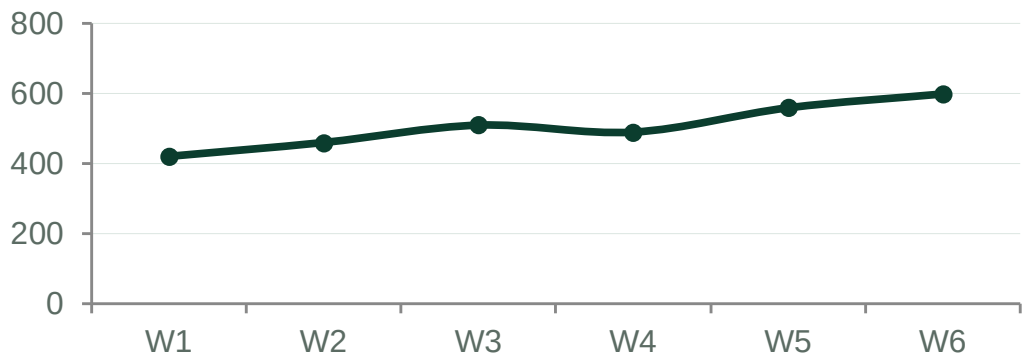

Ratings

Driver rating distribution · Customer vs. driver ratings

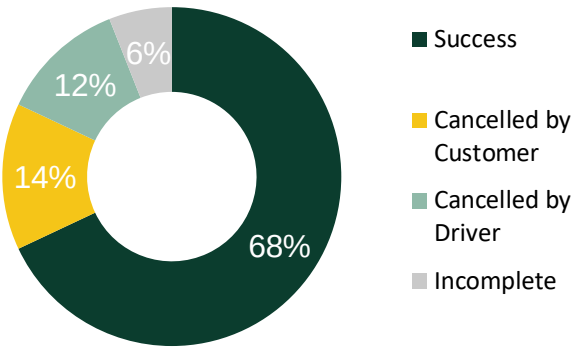

Ride Volume & Booking Status

Ride Volume Over Time

A time-series view showing how ride counts move day by day or week by week — useful for spotting trends and peak periods.

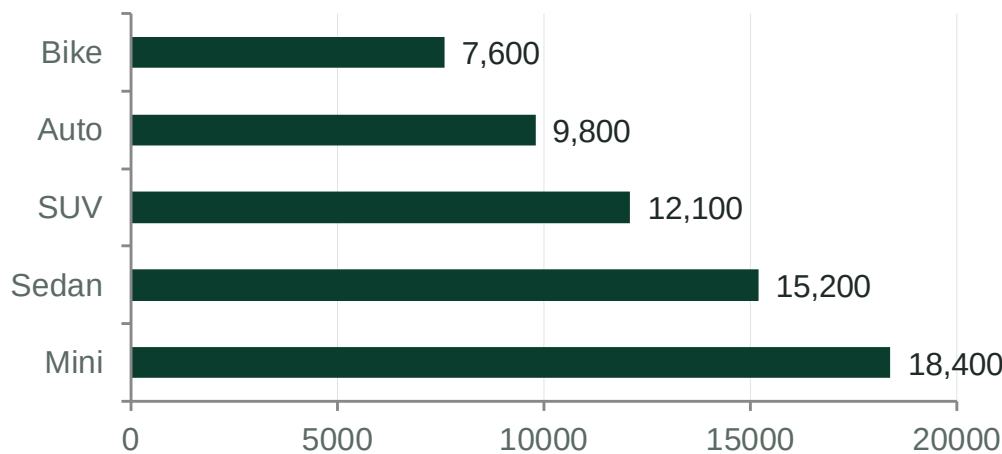

Booking Status Breakdown

A donut chart splitting bookings into successful, cancelled (by customer or driver), and incomplete rides.

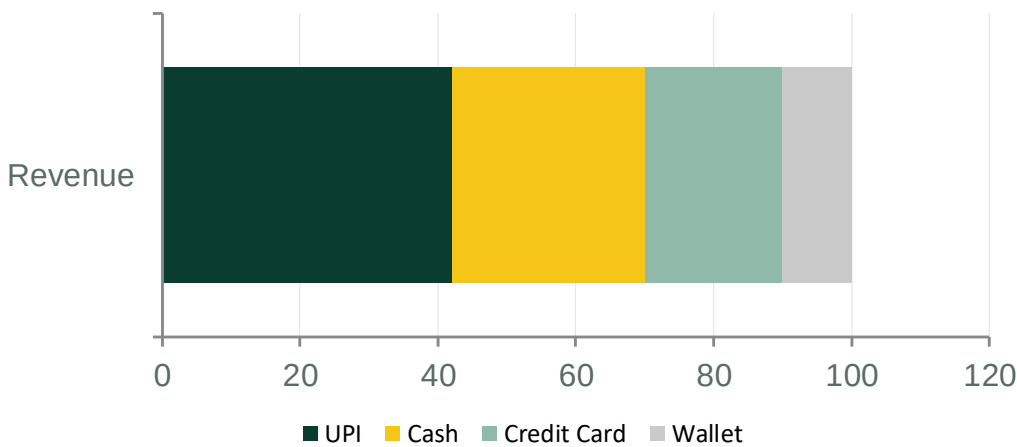

Vehicle Performance & Revenue Mix

Top 5 Vehicle Types by Ride Distance

Ranks vehicle categories by total distance covered — shows which vehicle types drive the most ride activity.

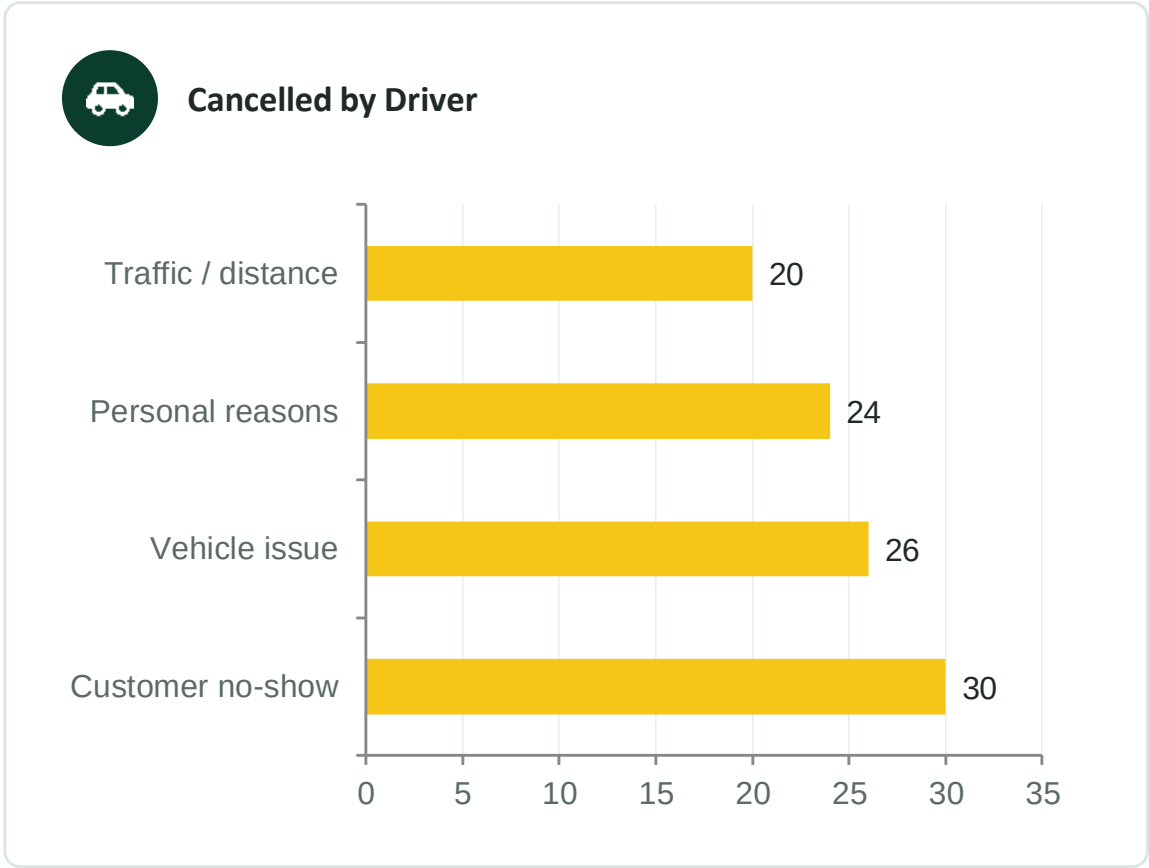

Revenue by Payment Method

Also on this page: Top 5 customers by booking value, and ride distance distribution per day.

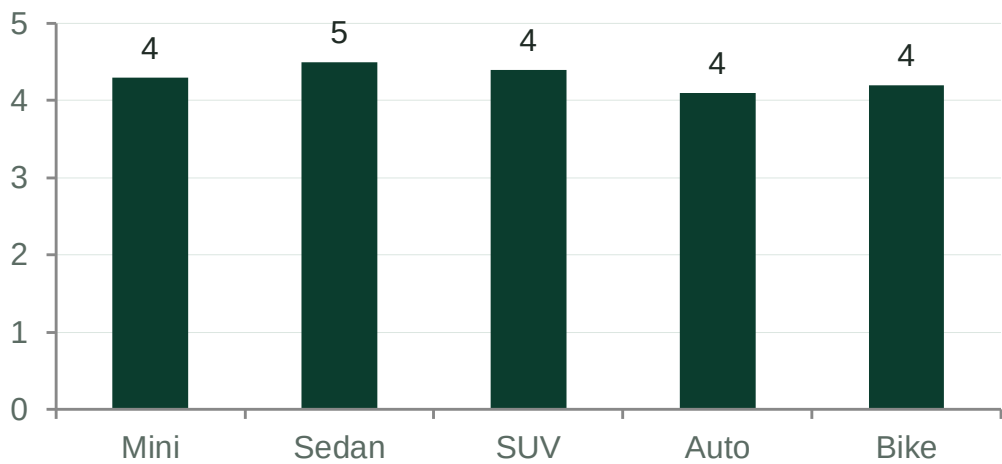

Why Rides Get Cancelled

Two bar charts compare cancellation reasons raised by customers versus drivers.

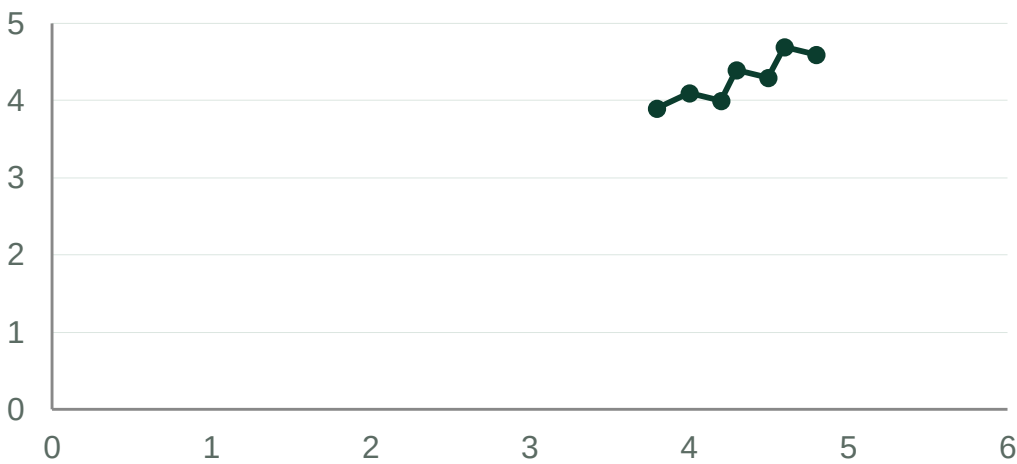

Customer & Driver Ratings

Avg. Customer Rating by Vehicle Type

Also included: driver rating distribution across vehicle types, shown as a box-plot style spread.

Customer vs. Driver Ratings

A scatter plot comparing how customer and driver ratings relate to each other across rides.

Built With

Power BI

Dashboard design, DAX measures, interactive visuals

Data Modeling

Structuring raw ride data into clean, usable tables

Data Analysis

Trend, distribution & comparison analysis

Storytelling

Organising insights into five clear, focused views

Relevant for Data / Business Analytics Roles

Business Metrics

KPI Dashboards

Data Visualization

Root-Cause Analysis
